

Conference Overview

The IET International Conference on Frontier Computing – Theory, Technologies and Applications will serve as a forum to present the current work by researchers from around the world, and act as a venue to provide discussions and highlight recent hot topics of computer science. In addition to technical sessions consisting of contributed papers, the conference will include invited presentations, a poster session, and tutorials.

Topics include but are not limited to the following:

- Interconnection Networks
- Neural and DNA Computing
- Distributed and Parallel Computing
- Database and Data Mining
- Cluster, Grid and P2P Computing
- Mobile Computing and Wireless Communications
- Innovative Networking and Applications
- Human-Computer Interface / Interaction
- Multimedia Technologies
- Image Processing
- Embedded and Ubiquitous Computing
- Advanced Networking and Applications - Medical Informatics
- Services Computing
- Security, Privacy and Trust
- Web Services and Internet Technologies Computing
- Fault-tolerant and Dependable Systems
- Multi-agent System and Applications
- Multimedia, Virtual Reality and Web Graphics
- E-Learning and Education
- Social, Ethical & Other Issues of Networked World
- Hardware / Software co-design
- Energy Efficiency and Power Aware Techniques
